題目：A new input-output-based framework for measuring the active and passive water use

作者：Song Yu

論文摘要：

- Construct a dual-perspective framework for measuring water use.
- Define the water use fluctuating due to macroeconomic condition changes.
- Introduce a new indicator to measure the rate of passive water use.
- Estimate the key water use channels from a passive perspective through SPA.
- Discuss the supply chain's intermediate sector's role for the water use.
